

MAINTENANCE AND CLEANING OF SMC SHOWER TRAYS

WARNING:

Stone effect shower trays cannot be cleaned with any type of common cleaning products as some of these products contain agents that can irreversibly damage the surface.

It is recommended to use a non-abrasive sponge or microfiber with soapy water to clean the tray and then clean the surface with tap water. Never use an abrasive sponge. Ventilate the bathroom thoroughly after cleaning.

The base should not be in contact with acetone or with nail varnish removers, hair coloring products, vinegar, or any type of products containing alcohol, acid, or solvents. Anti-limescale maintenance products are also prohibited.

CAUTION:

To get rid of deeper marks on surface, always test the cleaning product you intend to use on a non-visible area before applying it over the entire surface. We recommend to use the removable cover of the drain because in case of damage it can easily be replaced by a stainless steel cover.

IMPORTANT:

If you need to unclog the drain or drain hose, it is very important to be careful not to pour products containing acid or soda onto the receiver. It is recommended to use a funnel to pour this type of product directly into the drain, while protecting the tray well. These products could irreversibly damage the surface of the tray.
